**STARFIRE MINERALS INC. ENCOURAGED BY NICKEL SHOWINGS,
TIMMINS, ONTARIO, CANADA.**

Starfire Minerals Inc. has completed seven diamond drill holes for a total of 1,705 meters on its Langmuir South nickel prospect located in Langmuir Township, on the Shaw Dome portion of the Timmins Nickel belt lying about 25 km southeast of Timmins, Ontario, Canada. The Company is encouraged by results to date on both the Langmuir South nickel zone, known from previous historical drilling, and from the new Southeast Langmuir prospect.

Drilling of one hole on the Langmuir South zone has confirmed the presence of the historical sulphide zone. Previous historical work had projected a modest tonnage extending southward from the adjacent property to the north onto the Starfire claims. Additional drilling is needed to test projections of this zone to depth on the Starfire claims.

Drilling to date of two holes on a new ultramafic zone lying southeast of the Langmuir South area has returned encouraging anomalous nickel sulphide values over substantial core intercepts within komatiitic ultramafic flows. Values of approximately 0.1% Ni occur within two to three intervals over core lengths of 30 to 40 meters in intersections from both drill holes. The nickel sulphide mineralization in this Southeast Langmuir zone appears to be stratigraphically controlled within a series of ultramafic flows. This major ultramafic unit, over 375 meters in thickness, holds potential for both disseminated bulk-tonnage low-grade nickel mineralization and high-grade massive-sulphide nickel mineralization.

Additional drilling is planned for the southeast Langmuir zone in the near future to test an electromagnetic conductor that parallels the structure of the flow layers.

Four other drill holes penetrated conductive iron formation units and returned no significant nickel mineralization.

Starfire holds four claim blocks within the Langmuir nickel belt. Current production, exploration, and former production within the Langmuir nickel belt provide Starfire management with the basis to have confidence that this area warrants an extended exploration effort.

The Qualified Person for purposes of this press release is Arne Birkeland, P.Eng.

Starfire Minerals Inc. includes uranium, nickel and precious & base metal divisions with properties in Ontario, Quebec and British Columbia.

ON BEHALF OF THE BOARD OF DIRECTORS OF
